31	Glossary of terms

Hiscox is a diversified international insurance group with a powerful brand, strong balance sheet and plenty of room to grow. We are headquartered in Bermuda, listed on the London Stock Exchange, and currently have over 3,000 staff across 14 countries and 35 offices.

Our products and services reach every continent, and we are one of the only insurers to offer everything from small business and home insurance to reinsurance and insurance-linked securities.

Strategic focus

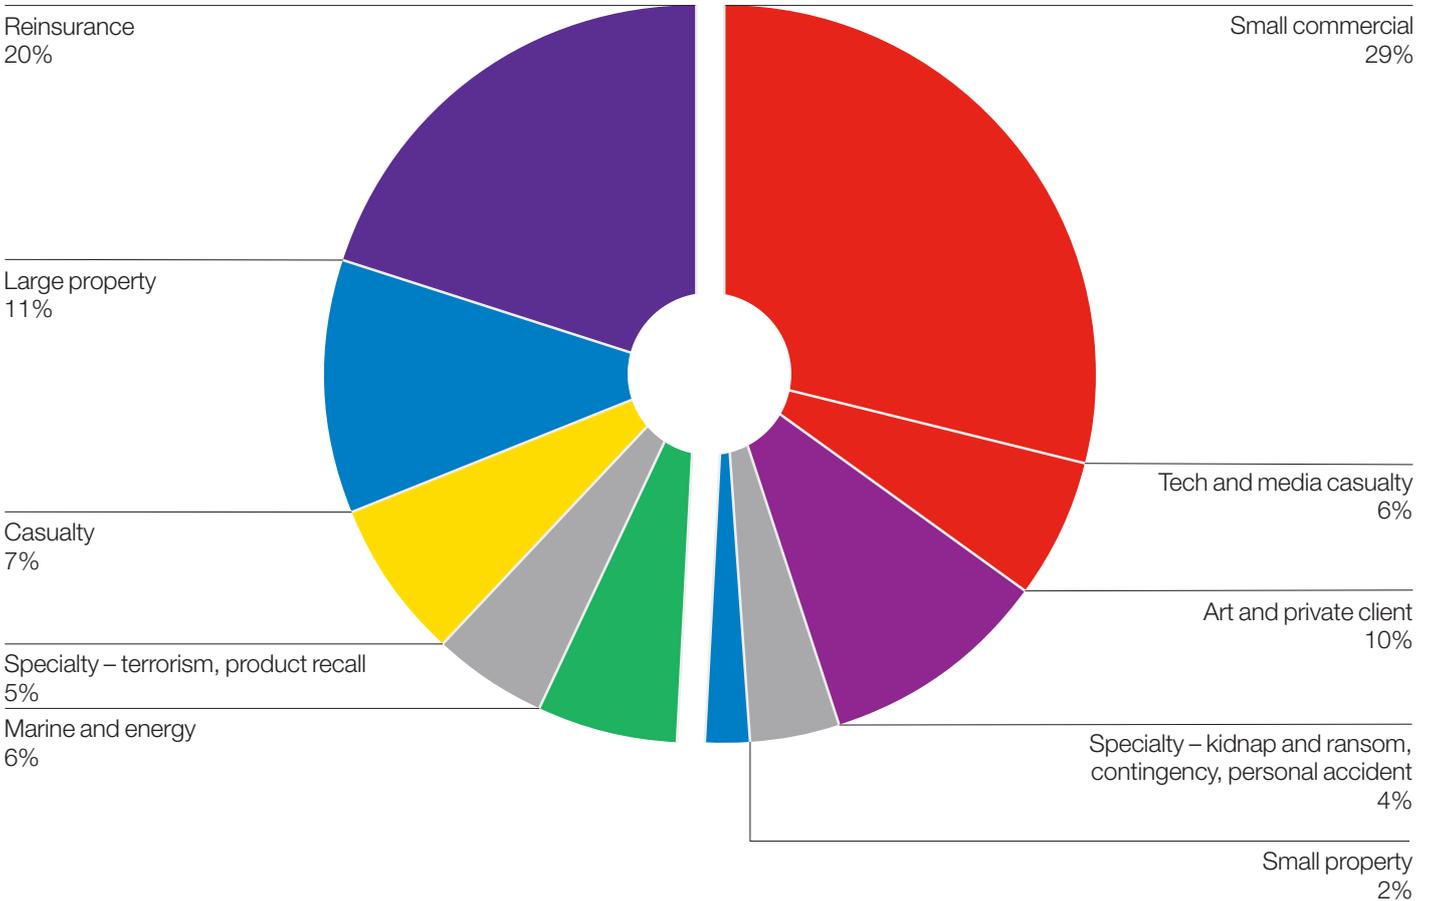

Total Group controlled income for 2020
100% = \$4,532 million

Big-ticket business

- Larger premium, globally traded, catastrophe-exposed business written mainly through Hiscox London Market and Hiscox Re & ILS.
- Shrinks and expands according to pricing environment.
- Excess profits allow further investment in retail development.

Retail business

- Smaller premium, locally traded, relatively less volatile business written mainly through Hiscox Retail.
- Growth between 5-15% per annum.
- Specialist knowledge differentiates us and investment in brand builds strong market position.
- Profits act as additional capital.

Executive summary

In accordance with its Insurance (Public Disclosure) Rules 2015 the Bermuda Monetary Authority (BMA) requires Bermudian insurers to publish annually a Financial Condition Report (FCR). The purpose of the FCR is to provide stakeholders, including policyholders, regulators and shareholders with additional information on the financial condition of the insurer over and above that contained in the annual financial statements.

The FCR contains qualitative and quantitative information of Hiscox's business and performance, governance structure, risk profile, solvency valuation, and capital management.

Business and performance summary

The ultimate parent of the Hiscox Group (Hiscox) is Hiscox Ltd, which is incorporated in Bermuda and has a FTSE 250 listing on the London Stock Exchange. Hiscox Ltd and its subsidiaries, which includes Hiscox Insurance Company (Bermuda) Limited (HIB), comprise the Hiscox Group, which is supervised by the BMA.

On June 30, 2020, HIB executed a merger with Hiscox Capital Limited (HCL). Pursuant to the terms of the merger agreement between the HIB and HCL, subsequent to the merger, HIB is the surviving entity, and all the shares of HCL were cancelled without repayment of capital.

Hiscox's principal activity is the transaction of general insurance business, in particular personal and commercial insurance, as well as reinsurance. Personal insurance includes: high-value household, fine art and collectibles as well as luxury motor vehicles. Commercial insurance is focused on small- and medium-sized businesses, particularly for professional indemnity and other liabilities such as employment liability, property risks and specialist lines of business.

In 2020, Covid-19 has had a significant impact on market conditions and the business. Estimates of the impact of Covid-19 and underlying assumptions continue to be reviewed on an ongoing basis; these have been factored into a number of the significant financial reporting judgements and has been reflected in the relevant sections of Hiscox's 2020 Report and Accounts.

Governance structure summary

There is an established system of governance with clear segregation of duties and delegation of responsibilities to various committees reporting to the Hiscox Ltd Board of Directors. Similarly, HIB has formalised committee structures. Ultimate responsibility resides with the Boards of Directors of each company. Each Board meets regularly throughout the year and is provided with appropriate and timely information to enable it to review business strategy, trading performance, business risks and opportunities, solvency and regulatory compliance.

Hiscox operates a three lines of defence model, which establishes clear duties, roles and responsibilities in order to manage the full range of risks to which it is exposed. There are clear reporting lines to the Board at all levels within the organisation to ensure that information is appropriately communicated.

Capital management summary

The Group operates with a strong solvency position. The amount of available capital held at year end 2020 is \$2,431 million*, comfortably meeting regulatory, rating agency and internal capital requirements. Our year-end 2020 BSCR solvency ratio is 187%, which includes the second stage of the change to the BSCR standard formula being phased in over a three-year period beginning in 2019. The final remaining stage of the changes is expected to reduce the Group's BSCR solvency coverage ratio by an estimated ten percentage points over the next year.

The Group expects to mitigate the impact of the changes to the BSCR standard formula through ongoing capital generation over the remaining year of the transition period.

In addition, each of the respective insurance carriers holds appropriate capital positions on a local regulatory basis.

The Group monitors its capital requirements based on both external risk measures, set by regulators and the rating agencies, and its own internal guidelines of risk appetite. Hiscox has a robust capital position and financial flexibility to deploy resources as needed across the Group.

Decisions on optimal capital levels are an integral part of Hiscox's day-to-day management, business planning and forward-looking assessment of risk processes, which cover a three-year time horizon.

There were no material changes to Hiscox's governance structure and capital management approach during the reporting period. Further details are included in this report.

*\$2,431 million available capital, comprising net tangible asset value of \$2,055 million and subordinated debt of \$376 million.

Geographic locations

The Hiscox Group has over 3,000 people in 14 countries. Our operations span every continent and we are not overly reliant on any one of our divisions for the Group's overall profit.

A. Business and performance

A.1. Business

The Hiscox Group ('Hiscox'), headquartered in Hamilton, Bermuda, comprises Hiscox Ltd and its subsidiaries (see Appendix I). Hiscox Ltd's ordinary shares are listed on the London Stock Exchange. In addition to Hiscox Ltd, Hiscox Insurance Company (Bermuda) Limited is a Class 4 insurer and registered and domiciled in Bermuda.

As at 31 December 2020, Hiscox Ltd had been notified of the following interests of 5% or more of voting rights in its ordinary shares:

Sun Life Financial Group	8.83%
The Capital Group Companies, Inc.	8.59%
Fidelity Management & Research	7.64%
BlackRock, Inc.	6.38%

Impact of Covid-19

In response to Covid-19, the Group reviewed and assessed the potential implications and exposure for each class of business that the Group underwrites, across all its platforms, with involvement from underwriting, reserving, claims and finance teams. The output of this assessment formed the basis of reserving.

The Group has material exposure to losses arising out of Covid-19 and currently reserves \$475 million net of reinsurance for these claims. The Covid-19 pandemic is an unprecedented event for the insurance industry and the effects of it as a loss event to the insurance and reinsurance markets remain both ongoing and uncertain. The ultimate amounts of these claims are subject to a higher than normal level of uncertainty in the best estimate at this stage of development. Consequentially, in measuring the liabilities, the Group has included an allowance for risk and uncertainties that is above the best estimate to reflect the early stage in the claim development process.

Investment performance

The following represents the market values and performance of our investment portfolio on a Group and legal entity basis:

B. Governance structure

B.1. Board and executive

Hiscox has established and continues to maintain a sound corporate governance framework that includes principles on levels of authority, accountability, responsibility, compliance and oversight. Hiscox's governance framework has regard for international best practice on effective corporate governance. Hiscox Ltd and HIB (collectively, the Companies) also comply with the BMA's Insurance Code of Conduct under Section 4 of the Insurance Act 1978 and the Insurance (Group Supervision) Rules 2011, as applicable. The Companies are further guided by the BMA Guidance Note on Corporate Governance March 2005.

Ultimate responsibility for the sound and prudent governance of the Companies rests with the respective Boards of Directors (Boards). The Ltd Board consists of the Non Executive Chairman, the Group Executives and Independent Non Executive Directors. Details of the Board members and their experience can be found in Appendix II. The Boards are responsible for ensuring that corporate governance policies and practices are developed and applied in a prudent manner.

To guide the Boards' responsibilities, the Companies have documented Bye-Laws, Governance Manuals, Board Terms of Reference, Board Committee Terms of Reference and organisational charts.

The Boards meet regularly throughout the year and operate within the established governance framework, with established terms of reference.

The Boards are supplied with appropriate and timely information to enable them to review business strategy, trading performance, business risks and opportunities. The Boards undertake to review annually the effectiveness of the Companies' governance frameworks together with the Board's own effectiveness and performance.

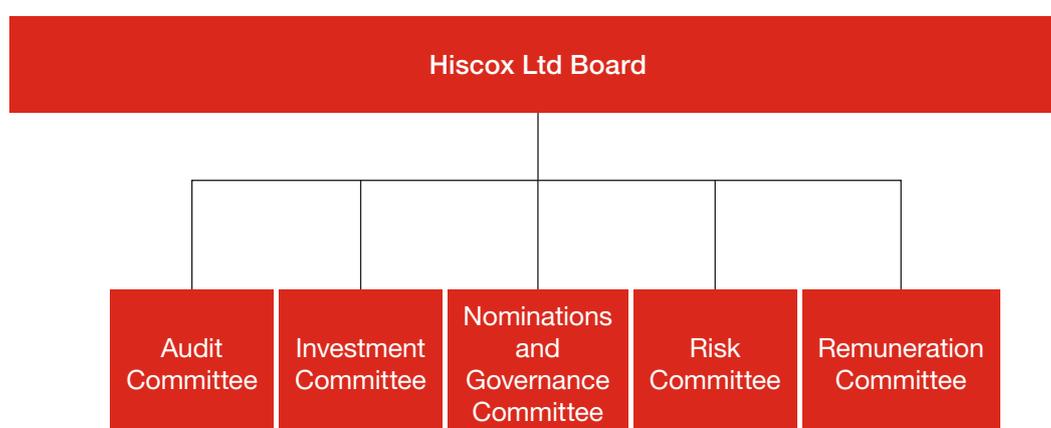

The Ltd Board has appointed and authorised a number of committees to manage aspects of the Group's affairs including financial reporting, internal control and risk management. Each committee operates within established written terms of reference and each committee Chairman reports directly to the Board.

The Audit Committee

The Audit Committee of Hiscox Ltd comprises the Non Executive Directors and typically meets at least four times a year. The Committee as a whole is considered to have competence relevant to the sector in which the Company operates. The Committee operates according to terms of reference published on the Group's website and assists the Board on matters of financial reporting, oversees the relationship with internal and external audit and oversees internal controls including claims and reserving. HIB also has an Audit Committee which typically meets at least four times a year.

The Committee monitors the scope, results and cost effectiveness of the internal and external audit functions, the independence and objectivity of the external auditors, and the nature and extent of non-audit work undertaken by the external auditors together with the level of related fees.

Structure of the Committees to the Board

The Audit Committees receive reports from the auditors who also attend meetings of the Committees to report on the status of their audit and any findings. This allows the Committees to monitor the effectiveness of the auditors during the year. Senior management and external auditors attend Audit Committees meetings at the discretion of the Chairman, as appropriate.

The Investment Committee

The Investment Committee has oversight of the Group's investments. It comprises the Independent Non Executive Directors, the Chief Executive, the Chief Financial Officer, and is chaired by Robert Childs, who is also Chairman of Hiscox Ltd Board. The Committee approves the investment strategy and overall risk appetite. It typically meets at least four times a year and makes appropriate recommendations to the Board.

The Nominations and Governance Committee

The Nominations and Governance Committee comprises the Non Executive Directors and is chaired by Robert Childs, who is also Chairman of the Hiscox Ltd Board. The Committee typically meets at least four times a year. The Committee's role is to monitor the structure, size and composition of the Hiscox Ltd Board and, when Board vacancies arise, to nominate for approval by the Board, appropriate candidates to fill those roles. The Group believes that opportunity should be limited only by an individual's ability and drive. The Committee considers diversity, including gender and race diversity, when recommending appointments to the Board.

The Committee has a policy in place to ensure that the candidate pool for each new appointment includes at least one female and one ethnic minority candidate, but does not consider it appropriate to set quotas for diversity. In 2020, we complied with the provisions of the Hampton-Alexander Review, which set a minimum target for FTSE 350 companies to achieve 33% representation of women on FTSE 350 boards and in the two layers of leadership below the Board (the Executive Committee and the direct reports to the Executive Committee) by the end of 2020. We have also complied with the target of having at least one ethnic minority Director on the Board by 2021, as set out in the Parker Review.

Gender diversity at 31 December 2020

	Male	Female
Board	64%	36%
Executive Committee	60%	40%
Direct reports to the Executive Committee	57%	43%
All employees	50%	50%

The Committee also has a role in considering the succession planning for Executive Directors and senior managers, and to make recommendations on the succession planning for the Chairman and the Chief Executive and other members of the senior management group. The Committee reviews the Board, Committee and Director evaluation exercises, the outcomes and actions taken and feeds this into Board composition reviews.

The Nominations and Governance Committee also has responsibility for the review of potential conflicts.

The Risk Committee

The Risk Committee of the Board oversees the Group's risk strategy and appetite, and its risk profile by reviewing the effectiveness of risk management activities and monitoring the Group's risk exposures to inform decisions. The Committee typically meets at least four times a year. The Committee comprises the Non Executive Directors. As part of the annual risk management cycle, HIB also has a Risk Committee.

The Remuneration Committee

The Remuneration Committee comprises the Independent Non Executive Directors and typically meets at least four times a year. The Remuneration Committee takes care to recognise and manage conflicts of interest when receiving views from Executive Directors or senior management or consulting the Chief Executive about its proposals. No Executive is permitted to be present when the Committee discusses his or her remuneration. Executive Directors are subject to malus and clawback provisions in relation to their remuneration.

B.2. Management and governance structure

The Operations Committee

The Operations Committee comprises Senior Executives and meets regularly. It makes recommendations to the Board and approves various matters.

The Committee considers and sets Group operational priorities including major resources and investments, drive delivery across the Group, takes decisions on annual budgets, business plans, mergers and acquisitions, considers significant issues raised by management and approves exceptional spend within the limits established by the Board. Below this there are local management teams that drive the local businesses.

Corporate governance

Hiscox Ltd is required by Listing Rules applicable to overseas entities with a premium listing on the London Stock Exchange, to make prescribed disclosures in respect of its corporate governance arrangements. This includes an annual statement confirming its compliance with the UK Corporate Governance Code (the Code) and disclosure of its governance arrangements against a set of principles and provisions contained in the Code.

The Boards have unlimited access rights to the respective company information and have the authority to seek independent counsel as required.

It is the responsibility of the Boards to ensure the effectiveness of the governance framework, redefining the framework where necessary. Action may be delegated to Board Committees, management or individual staff members. The Boards regularly monitor the Companies' risk profiles and assess against established strategies and objectives.

The roles and activities of the Chairman and Chief

Executive are distinct and separate. The Chairman is responsible for running an effective Board including oversight of corporate governance and meets periodically with the Senior Independent Director. The Chief Executive has responsibility for running the Group's business.

The Hiscox Ltd Board comprises the Non Executive Chairman, three Executive Directors, and seven Independent Non Executive Directors, including a Senior Independent Director. The Board has appointed and authorised a number of Committees to manage aspects of the Group's affairs including financial reporting, internal control and risk management. Each Committee operates within established written terms of reference and each Committee Chairman reports to the Board on the Committee's activities.

B.3. Remuneration

Hiscox has a single remuneration policy which is applicable to all legal entities and therefore applies to all members of staff supplying intra-group services, including Executive Directors.

The primary objective of Hiscox Group is to deliver strong shareholder returns across the cycle and consistently grow dividends and net asset value per share, while providing innovative insurance solutions to meet customer needs. The aim is to achieve this by building a diversified business which gives flexibility throughout the cycle.

When setting targets for its business units, the Group seeks to motivate strong performance but in a manner which encourages sustainable behaviours in line with the defined risk appetite of individual entities, including HIB. The variable pay elements for staff supplying services to HIB are structured with these strategic objectives in mind.

Return on equity (ROE) and growth of net asset value per share are key measures of performance. From 2018, vesting of the long-term incentive plan has been subject to growth of net asset value per share plus dividends. The use of ROE measures ensure profitability measures also take into account the capital base utilised in the generation of profits, while growth in net asset value is a key strategic goal and is clearly linked to the delivery of long-term shareholder returns. For the 2021 PSP awards, a second measure will be introduced, with 40% of the awards to be based on relative total shareholder return (TSR) against a group of global insurance peers. The structure of the incentive arrangements and the targets set and assessed are intended to be inherently risk-adjusted taking into account exposure to current and future risk.

The bonus and incentive funding mechanism is set at a level which is deemed by the Board's Remuneration Committee to be fully affordable and not produce outcomes which would compromise financial stability.

B.4. Fitness and propriety requirement

The Nominations and Governance Committee monitors the composition of the Group Board and considers its

diversity, balance of skills, experience, independence and knowledge to ensure that it remains appropriate. Fitness and propriety is assessed for any prospective Directors prior to their joining the Board and there is a formal induction process for new Directors. Induction training for new Directors of Hiscox Ltd includes an overview of UK Corporate Governance Code (the Code) requirements, and on an annual basis a report is made to the Hiscox Ltd Audit Committee on the Companies' compliance with the Code. Existing Directors are provided with the opportunity to attend training sessions. Hiscox considers an appropriate Board member to have a balance of skills, experience, independence and knowledge. The evaluation typically includes a review focused on these four areas. The evaluation also reviews how the Board has worked together overall as a unit.

Senior Executives are assessed both when an individual is initially appointed and on an ongoing basis. The initial assessment is conducted during the hiring stage through the interview process. Ongoing assessments are conducted via the Group's formal performance and development review process. Fitness and propriety is assessed annually.

B.5. Risk management and solvency self-assessment

Hiscox has an enterprise-wide approach to managing risk that applies across the Group including Hiscox Ltd and HIB, as described in the risk management framework policy.

The overall objective of risk management is to optimise risk-return decision-making while ensuring that the total exposure remains within the parameters set by the respective boards. The risk management framework provides a formal structure for risk governance and risk-based decision-making as well as a controlled and consistent approach for how risk is identified, measured, mitigated, monitored and reported across the Group. This enables exposures to be regularly monitored and evaluated against the respective boards' risks appetite and limits to assess the overall level of risk being taken, with consideration given to how different exposures and risk types interact and whether they may result in correlations, concentrations or dependencies.

Risk policies addressing each main risk type describe the specific approaches to identify, measure, manage and report on these risk exposures and are reviewed on an annual basis.

The risk management framework is reviewed regularly in light of changes to the Group's risk profile, the external environment and evolving industry practice on risk management and governance.

The Group risk team is responsible for designing, facilitating the implementation of and maintaining the risk management framework. The team is also responsible for disseminating expectations around enterprise risk management to the business and for reporting on risk to the respective boards and risk committees. The risk team is led by the Group CRO, who reports to the Group CEO and Chair of the Hiscox Ltd Risk Committee. Responsibility for the implementation of the risk management framework resides with the CEO of each of the operating entities.

Key exposures are identified, measured, managed and reported during the course of the year for Hiscox Ltd and HIB using various processes and tools. These include:

- using qualitative and quantitative approaches to assess risk exposure (in aggregate and by risk type) against Board-approved risk appetite and limits;
- performing independent model validation on the Group’s risk and capital models to assess modelling methodology, approach, limitations and output;
- risk reporting focused on topical live issues with actions and mitigation plans;
- stress and scenario testing, performed to identify and measure the likelihood and impact of potential events;
- specific risk reviews that provide a deeper understanding of key risks and potential exposures to the business;
- the risk and control register, which sets out the material risks for each entity, the key controls in place to mitigate them, and owners accountable for the management of each risk and operation of each control;
- the risk and control self-assessment (RCSA) process conducted at least annually, reviewing the risk and control register for completeness and accuracy. Each risk owner is required to review their risks and score them for inherent and residual (post controls) risk. Actions are put into place with risk owners where gaps are identified.

The Board and management teams for Hiscox Ltd and HIB review a number of these processes and tools during the year.

Risk management framework

Risk identification, including risk definition and risk owner

Risk identification is achieved by clearly defining an exposure (e.g. identifying the potential drivers and consequences of the risk) and identifying a risk owner responsible for managing the exposure. Material risks and the controls used to mitigate them are documented in the risk and control register (RCR).

The RCR details current key risk exposures including a qualitative assessment of the probability and impact, risk mitigation/controls and related monitoring and reporting processes. The RCR is periodically reviewed and updated as Hiscox Ltd identifies and assesses the material risk exposures and the appropriateness and effectiveness of the risk management framework and system of internal control.

Risk appetite

Risk appetite communicates the nature and degree of risk the respective boards are prepared to take to meet their strategic objectives and business plan. Hiscox Ltd’s risk appetite framework allows clear monitoring and management of risk exposure in relation to the Board’s willingness to take on risk.

Risk measurement

Risk measurement is the assessment of actual risk exposures using various methods including risk and capital models, stress and scenario testing, reverse stress testing, and expert judgement. This enables the prioritisation of risk and mitigating actions.

Risk management framework

Risk mitigation

After risks are formally assessed, a decision is made on how to mitigate them to reduce exposure or maintain it at an acceptable level. Determining the most appropriate response involves understanding the associated costs and benefits.

Risk mitigation involves implementing and maintaining internal controls and other techniques to manage, reduce or eliminate risk exposures. Applying controls to reduce the likelihood or impact of a risk occurring is one of the available methods to respond to risks, in addition to accepting the risk without further action, taking action to avoid the risk completely, or transferring all or some of the risk – most commonly to other insurers.

Risk monitoring

Hiscox operates a number of practices and tools to monitor risk exposures, trends, effectiveness of controls and changes across the Company.

Monitoring of risks occurs at various levels across the Group, including at functional and management level. Critical risks and other significant exposures are monitored at Board and Committee level on a regular basis, with more frequent monitoring occurring at the business and functional levels.

Risk reporting

Hiscox employs a broad risk reporting system to raise awareness of risks across the business.

Risk reporting describes the methods and forums used to communicate and discuss risk and control exposures and issues, including the escalation routes that support appropriate risk governance.

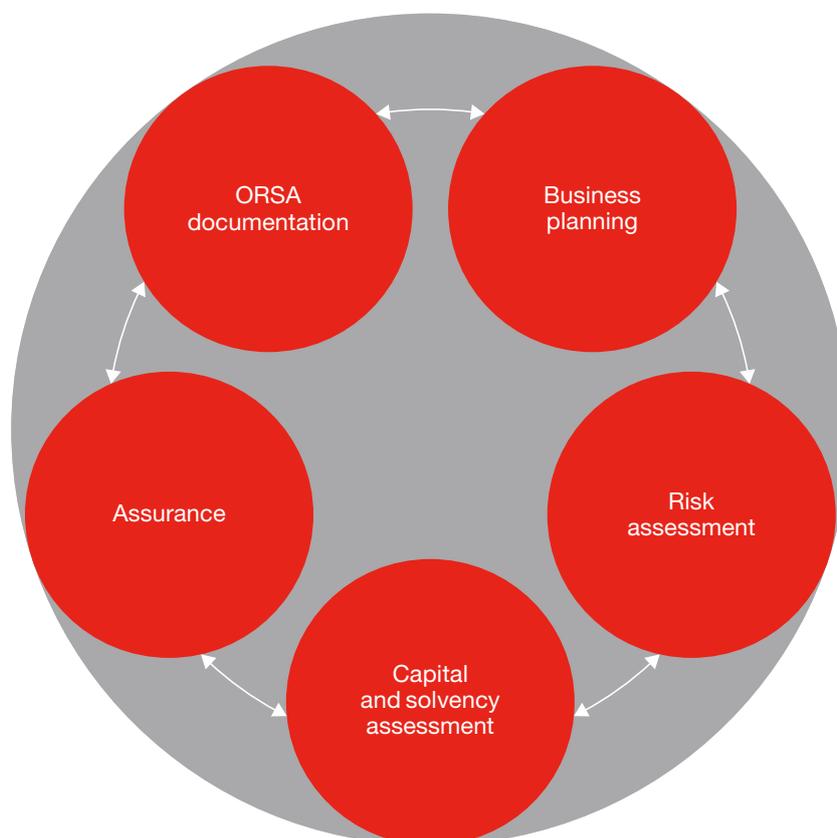

Material risk types and critical risks are formally reported to management, the Board and Board Risk Committee regularly, with more frequent reporting at the business and functional levels.

Risk management and solvency self-assessment systems implementation

The Group's Own Risk and Solvency Assessment (ORSA) process (outlined in the figure below) applies to Hiscox Ltd and HIB, culminating in the Group Solvency Self Assessment (GSSA) report for Hiscox Ltd and Commercial Insurer Solvency Self Assessment (CISSA) report for HIB on at least an annual basis.

The ORSA process is defined as the set of ongoing practices and business decisions that each entity engages in to identify, assess, manage, monitor and report the risks it is exposed to and to determine its corresponding capital needs on a current and forward-looking basis, in light of its business plan, risk profile, risk appetite and limits. As such, it is a core component of the risk management framework. The ORSA also stresses the risk profile on a current and forward-looking basis.

ORSA governance

ORSA capital for the Group and HIB is based on Hiscox's own internally assessed capital requirements and is informed by the Group's risk and capital models, that together with the Bermuda Solvency and Capital Return (BSCR) form part of the BMA's annual solvency assessment.

The Group sets risk limits and tolerances, aligned to risk appetite that reflect the amount of risk that it is willing to accept as a business. These limits are set based on the proportion of core capital that the Board is willing to risk in taking a related strategy or business plan 'bet'. Current risk exposure (in aggregate and by the key risk type) is monitored against these pre-defined limits throughout the year.

Both the risk management framework and ORSA process are implemented and embedded in operations across the Group including Hiscox Ltd and HIB. Risk management roles and responsibilities, including how they relate to each of these, are coordinated across a 'three lines of defence model'.

There are also a number of committees and working groups across the first and second lines of defence that facilitate the management and oversight of risk. These focus on specific risks such as exposure management, reserve, investment, credit, capital and liquidity and emerging risks. There is also a Group Risk and Capital Committee (GRCC) and Group Underwriting Review Committee (GURC) that oversee and make wider Group decisions on risk.

The respective Boards are at the heart of Hiscox's risk governance, are responsible for setting risk strategy and appetite, and for overseeing risk management, including the implementation and design of the risk management framework.

Oversight of risk management practices is delegated by the Hiscox Ltd and HIB boards to risk committees that advise the boards on how best to manage the entities' risk profiles. The Risk Committees monitor actual exposure to inform forward-looking strategic and tactical decisions, and review the effectiveness of risk management activities. The Risk Committees rely on frequent updates from Group Risk, from within the business and from independent risk experts.

Relationship between the solvency self-assessment, solvency needs, and capital and risk management systems

The ORSA process is a formal continuous process encompassing the strategy and business plan, the composition and dynamics of the current and forward-looking risk profile, the quality and quantity of capital needed to support these plans, and the robustness of each entity's current and prospective solvency and liquidity.

The ORSA seeks to identify and measure all material risks, and aids in the decision-making process regarding which risks each entity seeks to eliminate, transfer or retain within its agreed risk appetite and tolerance. The ORSA also facilitates the identification of contingent sources of liquidity and capital support to ensure strategic objectives are achieved.

Three lines of defence model

First line of defence *Owens risk and controls*

Responsible for ownership and management of risks on a day-to-day basis. Consists of everyone at every level in the organisation, as all have responsibility for risk management at an operational level.

Second line of defence *Assesses, challenges and advises on risk objectively*

Provides independent oversight, challenge and support to the first line of defence. Includes the Group risk team and the compliance team.

Third line of defence *Provides independent assurance of risk control*

Provides independent assurance to the Board that risk control is being managed in line with approved policies, appetite, frameworks and processes, and helps verify that the system of internal control is effective. Consists of the internal audit function.

The ORSA process is evidenced during the course of the year as part of the risk monitoring and reporting that is presented to the Board and/or Risk Committee. ORSA reports are formally reviewed and approved by senior management, the Group CRO and the respective Risk Committees. They are approved by the respective boards.

B.6. Internal controls

System of internal control

The below diagram illustrates the five components of the system of internal control. These are all reinforced by the roles of the Board in owning, steering and overseeing the effective design and implementation of the system of internal control within the formal risk governance framework.

The control environment is the collective set of standards, processes and structures that provide the basis for establishing and maintaining internal control across Hiscox Ltd and HIB.

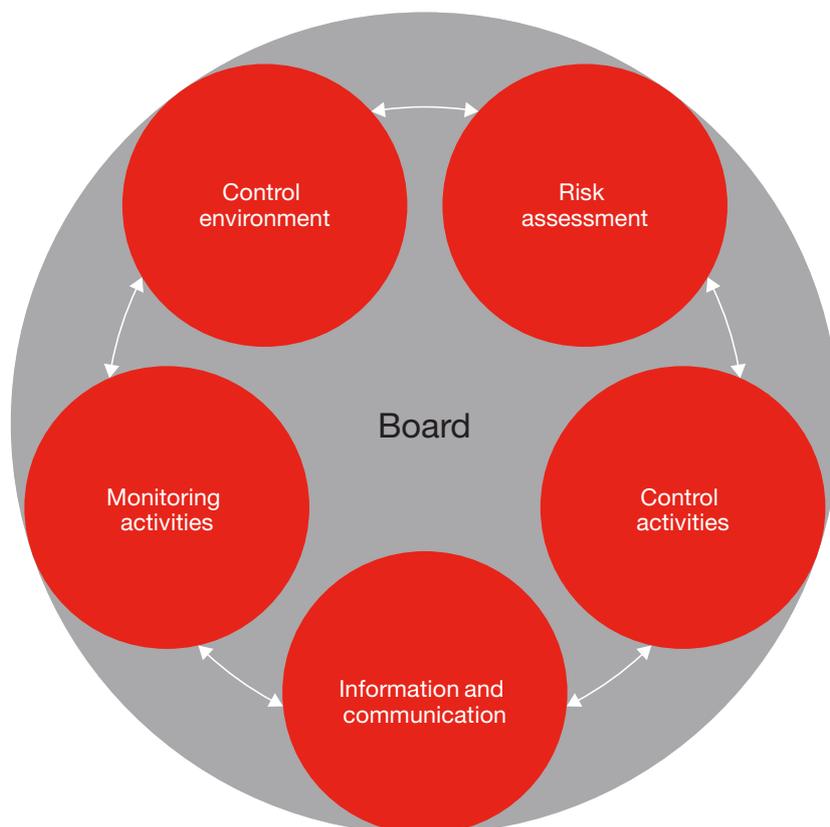

The business faces a variety of risks from both external and internal sources. Risk assessment is the process by which the Group identifies and assesses the material risks which could influence the achievement of its objectives. Control activities are the actions that individuals take to implement and operate internal controls to reduce the impact or likelihood of the risk and keep exposure within appetite. They are performed at various stages within business processes and across the technology environment. They may be preventative, directive, detective or corrective

in nature and encompass a range of both manual and automated activities.

Information on the risk environment is routinely shared with the business. Management uses information from both internal and external sources to support decision making and ensure the functioning of the system of internal control and reports this to the Board and Risk Committee as appropriate, to enable them to discharge their oversight responsibilities.

Risks and controls are monitored by risk and control owners through normal day-to-day business operations. Risk Committees are held quarterly to monitor risk exposures. On an annual basis key risks and controls are assessed and confirmed as appropriate by the risk owners as part of the risk and control register (RCSA) review and update process. The Group's system of internal control comprises the internal control framework, administrative and accounting procedures, transparent reporting arrangements at all levels (implemented through the three lines of defence model) and the compliance function. In addition, internal audit provides an annual assessment to the Board and Audit Committee on internal control.

System of internal control

The internal control framework and the management of internal controls to mitigate risk exposures are integral components of the Hiscox risk management framework. Underpinning this, the Group's policies for each material risk type include details of roles and responsibilities in relation to the ownership or performance of key controls. The internal control framework is documented in the risk and control register, with an assessment being performed at least annually through the risk and control self-assessment (RCSA) process.

Compliance function

Hiscox Group's compliance function is independent of any business unit and is, with risk management, the second line of defence in the Hiscox Group's risk management framework. It has four key functions: regulatory policy and advisory; compliance monitoring; second-line regulatory reporting oversight and communication with regulatory supervisors. It advises on the design and enhancement of internal controls to ensure regulatory compliance and operates some internal controls itself.

The compliance function provides regular reports to the boards on the management of compliance risk and the impact of any future changes in the regulatory environment on the Company. The compliance function is also responsible for the creation and implementation of internal regulatory policies and for monitoring the adherence to these policies. In carrying out its duties, the compliance function is entitled to full and unrestricted access to all of the Group's activities and to the boards.

Internal audit

The Group internal audit function provides objective and independent assurance advice to the Ltd Board, the Group Audit Committee (GAC) and the boards of its subsidiaries over the processes and systems of internal control and risk management in operation across the Group. Its work is based on an internal audit plan of reviews which is developed using a risk-based approach. In carrying out its duties and responsibilities, internal audit is entitled to full and unrestricted access to all of the Group's activities, records, property and information and full and free access to the GAC.

Internal audit is independent of the activities that it audits in order to ensure unbiased judgments and impartial advice to the GAC and to management.

In order to ensure this independence and objectivity, the internal audit team members report directly to the Head of Group Internal Audit, whose primary reporting line is to the Chair of the Group Audit Committee for matters relating to internal audit and to the Group CFO for other administrative matters.

Actuarial function

The actuarial function is responsible for co-ordinating the estimation of reserves (e.g. ensuring that the methodologies and underlying models used for this purpose are appropriate); assessing the sufficiency and quality of the data used; monitoring claims experience and comparing those against the amounts predicted by the actuarial models; and providing opinions on the Group's underwriting policy and reinsurance arrangements.

The Group actuarial function is made up of qualified individuals who have expert knowledge of actuarial and financial mathematics, led by the Hiscox Group Chief Actuary. It is operationally independent from the revenue-generating management and administrative functions for the purposes of forming and formulating actuarial views and opinions. Potential conflicts of interests are mitigated by ensuring adequate segregation of responsibilities, distinct reporting lines and the use of external parties where necessary. In carrying out its duties and responsibilities, the actuarial function is entitled to:

- full and unrestricted access to all of the Group's relevant activities, records, property and information;
- allocate and apply resources, scope of work and techniques, set frequencies and select appropriate subjects in order to meet its objectives;
- the assistance of staff across the Group where necessary to fulfil its objectives.

Outsourcing

Hiscox Ltd and HIB have adopted the Hiscox Group outsourcing policy. The outsourcing policy sets out the responsibilities and considerations for when outsourcing services, together with the associated reporting and monitoring arrangements to be implemented where outsourcing is used.

The purpose of the outsourcing policy is to set out the strategy and process for selecting and managing outsourced services, governed by this policy, that satisfy all applicable regulatory requirements whilst optimising the value obtained from service providers. Furthermore, the policy provides an approach that addresses the need to identify, assess and manage the potential operational risks of outsourcing resulting from significant changes to people, processes and systems.

The outsourcing policy has been developed to ensure that prudent selection and management methods are employed for outsourced arrangements and by providing a good practice guide.

The process covers:

- identification of potential suppliers;
- the obligations of the contracted parties;
- monitoring and management of the contract; and
- orderly exit from the contract.

The Group has not outsourced any control functions (i.e. actuarial, risk management, compliance and internal audit). The provision of all staff required to operate the business is conducted through Group service companies.

C. Risk profile

Hiscox's material risks and how these are mitigated

The key risk types that Hiscox is exposed to in its activities consist of strategic risk, underwriting risk, reserve risk, market risk, liquidity risk, credit risk, operational risk and Group risk (including concentration risk).

Risks are monitored by the first and second lines to ensure exposures remain within agreed risk appetite and limit. Breaches in appetite or significant control deficiencies are escalated to senior management and the respective board and/or Risk Committee for action.

A combination of proprietary and external models and qualitative measures are used to measure and quantify these risks. Changes in risk exposure are expected over time and result from internal drivers (e.g. strategic decisions) and external factors (e.g. market conditions).

Risks are controlled and mitigated in several ways, and monitored and reported across each of the three lines of defence. Significant exposures across each of the main risk types and how they are managed are detailed as follows.

C.1. Underwriting risk

Risk description

The predominant risk to which the business is exposed is insurance risk, which is assumed mainly through the underwriting process. Insurance risk is defined as ‘the possibility that insurance premiums and/or reserves are ultimately insufficient to fully settle claims and associated expenses’.

Within the risk and control register, it is sub-categorised into i) underwriting risk, and ii) reserve risk.

Underwriting risk

Underwriting risk encompasses people, process and system risks directly related to underwriting.

Key underwriting risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Insurance	Underwriting	Underwriting exposure management	Insurance exposures accumulate to an unacceptable level, are not fully understood or materialise unexpectedly.
		Pricing	Failure to price policies adequately or make commercial risk selection decisions within appetite.
		Authority breach	Accepting risks outside of agreed underwriting parameters or where authority limits have been breached.
		Contract or policy wordings	Policy wordings are vague, incorrect and/or do not adequately reflect exposure assumed (including the risk of non-affirmative cover).

Underwriting risk arises from poorly managed exposure, inappropriate underwriting models, loss experience not emerging as expected, changes in market conditions, poor staff training and monitoring.

Reserve risk

Reserve risk is defined as the risk of unsuitable case reserves (for example, over- or under-reserving) and/or insufficient technical reserves in place to meet incurred losses and associated expenses.

Key reserve risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Insurance	Reserves	Claims reserves	Unsuitable case reserves (e.g. over- or under-reserving) and/or insufficient technical reserves in place to meet: — incurred losses and associated expenses; (N.B. This individual risk is jointly assigned to the reserves and claims risk groupings).

Reserve risk arises as a result of the business’s core underwriting operations in that it needs to make financial provisions for earned unpaid claims, defence costs and related expenses to cover its ultimate liability both from reported claims and from ‘incurred but not yet reported’ (IBNR) claims. There is the possibility that the financial provisions or reserves held to cover the earned ultimate liabilities are not sufficient for its exposures, which could affect earnings, capital and possibly survival.

Risk mitigation

Hiscox has established controls to manage and mitigate its key insurance risks.

Examples of some key controls in place include:

- underwriting, claims and reserving reviews;
- underwriting and claims authority letters;
- underwriting exposure monitoring; and
- Group Underwriting Review Committee of underwriting strategy and performance against plan.

Peer reviews are in place for underwriting, claims and reserving, to act as an independent check that staff have acted within their authority and according to defined processes. Trends from peer reviews are reported to underwriting management to highlight control weaknesses and training needs.

Underwriting authority letters and claims authorities set out the parameters within which underwriting and claims staff can operate. For example, authority limits will be based on experience and restricted to certain lines of business, with referrals to a more senior underwriter for approval before binding a risk where necessary. Ensuring that underwriters operate within defined parameters helps to monitor its exposure to risk geographically and by line of business.

C.2. Market risk

Risk description

Market risk is the threat of unfavourable or unexpected movements in the value of Hiscox's assets and/or the income expected from them.

Within the risk and control register, market risk is sub-categorised into i) foreign exchange risk and, ii) investment risk.

Key market risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Market	Foreign exchange	FX risk	Foreign exchange risk arises from having to convert assets from one currency to another in order to cover liabilities due (e.g. claims).
	Investments	Investment risk	Probability of loss over a 12-month period for a given investment strategy, or the exposure to inappropriate assets/asset classes, or operating outside of authorised strategic or tactical asset allocation (SAA/TAA) limits.

Hiscox chooses to assume market risk in order to maximise the return on assets while ensuring that funds are available to pay claims when required. Liquidity risk mitigation includes diversification of the investment portfolio to ensure in the majority of circumstances claims can be paid without impacting the value of invested assets.

Risk mitigation

Hiscox has established controls to manage and mitigate its key market risks.

Examples of some key controls in place for market risks include:

- currency matching and asset-liability matching strategy;
- minimum cash limits; and
- investment manager performance management.

Matching the currency of assets with the currency of liabilities reduces the likelihood of not being able to pay claims due to currency fluctuations. Matching the maturity of assets with the expected timing of liabilities helps to maximise returns on the investment portfolio, and preserve liquidity, which helps to avoid liquidating assets before they are due to mature.

Hiscox has a minimum amount of cash that must be retained at all times. This helps to ensure planned and unforeseen liabilities can be covered in a timely manner, without impacting the investment portfolio.

The business uses external investment companies to manage its portfolio. The investment managers must operate within defined constraints set by Hiscox Ltd, and they provide regular updates on performance, which is reported to management and the investment group. The monitoring of the SAA limits are reviewed and approved by the Board.

C.3. Credit risk

Risk description

Credit risk is defined as the risk of loss or adverse financial impact due to default by counterparties to which the business is exposed.

Key credit risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Credit	Credit	Counterparty default (reinsurer)	Default or downgrade of reinsurance counterparty, causing them to renege on their reinsurance contract(s) or altering the terms of agreement (external).
		Counterparty default (broker)	Default of a broker counterparty, causing them to renege on or altering the terms of agreement (external).
		Counterparty default (other)	Default of counterparties other than reinsurers and brokers (e.g. banks, investment managers, other custodians).

Risk mitigation

Hiscox has established controls to manage and mitigate its key credit risks.

Examples of some key controls in place for credit risks include:

- reinsurance counterparty limits;
- broker exposure monitoring; and
- bank counterparty limits and exposure monitoring.

C.4. Liquidity risk

Risk description

Liquidity risk is defined as the inability to meet cash requirements from available resources within appropriate/required timescales.

The characteristics of liquidity risk mean that it should be viewed across three different time horizons:

- short-term – cash required in the coming months to cover normal trading activity including payment of known claims, expenditure and salaries;
- medium-term – cash required to meet medium-term funding requirements including tax and dividend payments and planned project and capital expenditure; and
- long-term – cash required to support the longer term ambitions of the business including underwriting capital to meet growth ambitions and funding to support potential future stress scenarios such as catastrophe losses.

Key liquidity risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Liquidity	Liquidity	Liquidity risk	Inability to meet cash requirements from available resources within appropriate/required timescales.

Liquidity risk arises from the need to pay insurance claims and other liabilities, which may have an uncertain timing or quantum. The business has to balance the liquidity of assets with their return and quality.

Risk mitigation

There are established controls in place to manage and mitigate key liquidity risks.

Examples of some key controls in place for liquidity risks include:

- minimum cash limits; and
- stress and scenario testing.

The Group has minimum cash requirements that must be retained at all times. The business also conducts stress and scenario testing to challenge the liquidity adequacy of the balance sheet. Any deficiencies are pro-actively identified and can be addressed accordingly. Further liquidity coverage ratios are reviewed by insurance carrier. The liquidity coverage ratios are designed to ensure a minimal level of contingency in the short/medium-term cash flow forecast.

C.5. Operational risk

Risk description

Operational risk is defined as the risk of direct or indirect loss resulting from internal processes/controls, people, systems or external events.

Operational risk is inherent in all activities undertaken and can be categorised into the following key elements:

- people: the management of human resources including employee behaviour and performance;
- systems: complex information technology (IT) systems are required to process large amounts of data in relatively short timeframes to facilitate timely service levels to customers; and
- processes: daily business operations generally involve a significant number of individual processes to enable the business to function efficiently.

Key operational risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Operational	People	Retention and organisational gaps	Loss of implicit knowledge and experience of key individuals or teams, or failure to recruit the necessary number or calibre of human resources.
		Employment reputation/compliance	Failure to ensure employment and compensation practices are in line with market standards and are appropriate in the context of employment law.
		Performance management	Ineffective (e.g. inefficient and reactive) management and/or monitoring of employee underperformance.
		Financial crime (excl. sanctions)	Failure to implement or maintain the processes and procedures necessary for the detection and prevention of fraud and financial crime, both internal and external.
	Systems	IT/systems failure	Major IT, systems or service failure (e.g. systems are disrupted, unavailable or insecure).
	Processes	Data security	Failure to implement or maintain the systems and processes necessary to protect the confidentiality, integrity or availability of information and data.
		Project risk/change management	Projects and/or change initiatives are not delivered to plan, budget or specification or the risks inherent to the project are not appropriately managed.
		Outsourcing	Ineffective or inadequate oversight of individual outsourced arrangements and/or the overall outsourcing portfolio; including both intra-group and external arrangements.
		Business continuity	Failure to restore the delivery of services, operations or premises to acceptable predefined levels following a disruptive incident.
		Financial misstatement	The risk that financial statements have been misstated to a material degree, as a result of error or fraud.
Reserving process		Ineffective processes, controls and systems in place to effectively manage and monitor reserves.	
Underwriting operations	Claims management	Ineffective management of claims (e.g. customer experience and appropriateness of decisions).	
		The processes, controls and systems in place to support and monitor individual underwriting decisions are insufficient/ineffective. 'Underwriting operations' covers (a) policy/documentation issuance (new business, renewals, mid-term adjustments, cancellations); (b) data capture; (c) monitoring of underwriter decisions; (d) delegated authority oversight.	

Operational risk is an unavoidable part of doing business, as no person, system or process is 100% reliable.

Risk mitigation

The Group has established controls to manage and mitigate its key operational risks.

Examples of some key controls in place for operational risks include:

People risks

- Succession planning.
- Onboarding process.

System risks

- IT disaster recovery plans.
- IT security.

Processes risks

- Project framework.
- Business continuity plan (BCP) testing.
- Underwriting and claims guidelines.
- Information Security Committee monitoring of data security and privacy.

In relation to people risks, there are defined succession plans in place for senior management, and a talent pool is maintained to ensure succession for a wider range of key roles from a longer term perspective. This helps to preserve knowledge and reduce the likelihood of gaps in management.

Hiscox has an onboarding process to ensure that all new staff have sufficient knowledge and support to carry out their role. This includes completing regulatory training and familiarisation with Hiscox policies.

System risks are controlled through access restrictions to network and systems. The system is protected against external threats through firewalls and email scanning. There are also varying levels of authority granted depending on roles.

A disaster recovery plan is in place and tested regularly to ensure the IT infrastructure can withstand a more severe incident without causing major disruption to the business.

Controls around process risks include a project framework to ensure a consistent approach and adequate governance around projects.

Business continuity planning and testing provide comfort that the business can continue to operate in challenging circumstances such as an office fire or flood.

Claims underwriting guides help to ensure that a consistent approach is taken to managing and reserving for claims. This reduces subjectivity in the level of reserves retained for claims with similar attributes.

C.6. Other material risks

Risk description

Other material risks include strategic risk, regulatory and legal risk and Group risk.

Strategic risk

Strategic risks are defined as the possibility of adverse outcomes that may result from strategic 'bets'/business initiatives taken or not taken by the Group. This may include business expansion or contraction, mergers and acquisitions, public positioning, reputation and brand building and subsequent Board oversight of such activities.

Hiscox's continuing success depends on how well it understands its clients, markets and the various external factors affecting the business. Having an ineffective strategy could have widespread repercussions on profitability, capital, market share, growth and reputation.

Key strategic risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Strategic	Strategic	Strategy evolution and execution	Ineffective business plans and strategies, decision making, resource allocation or adaptation to changes in the business environment.
		Management of financial performance	Management of finances (including expenses) is not suitably tracked or controlled and infringes overall profitability.
		Capital management	Holding of inadequate or inappropriate capital resources vs. risk profile, regulatory capital or rating agency capital requirements, and/or inefficient use of capital.
		Conduct risk	Failure to pay due regard to the interests of customers or failure to treat them fairly at all times.
		Technology strategy	Outdated technology strategy or solutions in place to support business growth and harness relevant emerging technologies.
		Management of conflicts of interest	Actual or perceived conflicts of interest between Group entities or with third party capital providers causing failure to fulfil its duties to stakeholders.

Regulatory and legal risk

The insurance industry is a highly regulated sector and, as such, is exposed to continuous regulatory change. This can affect the level of capital that firms are required to hold or require changes to how they are set up operationally from time to time. Regulatory and legal risk captures the risk of failing to act in accordance with existing and emerging regulatory and legal requirements, or of deteriorations in the quality of the Group's relationship with its key regulators.

Key regulatory and legal risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Regulatory and legal	Regulatory and legal	Regulatory risk	Failure to act in accordance with relevant regulatory requirements in all relevant jurisdictions or deterioration in the quality of relationship with one or more regulators.
		Sanctions	The risk of direct or indirect engagement, including financial transactions, with sanctioned entities (individuals, businesses or countries).
		Tax governance	Failure to act in accordance with relevant taxation laws or adapt to changes in taxation.
		Legal risk	Failure to act in accordance with relevant legal requirements in all relevant jurisdictions.
		Privacy and data protection	The potential loss of control over personal data.

Group risk

Group risk is defined as the risks arising from the interconnected nature of the Group and its entities. This includes the risk that transactions conducted between Hiscox Ltd, HIB and other entities within the Group lead to complex interdependencies; or that decisions taken by the Group or another entity compromises the business's position, strategy or regulatory standing (e.g. due to another entity failing).

Key Group risk exposures include:

Risk type	Risk grouping	Risk name	Risk definition
Group	Group	Internal transactions	Transactions conducted between entities within the Group lead to complex interdependencies amongst the Group or are not conducted in accordance with legal and/or regulatory requirements.
		Contagion risk	Decision(s) or action(s) taken by the Group or another carrier within the Group compromises the entity in question's going-concern position, strategy or regulatory standing (e.g. failure of carrier or other legal entity).

Risk mitigation

Strategic risk

Examples of some key controls in place for strategic risks include:

- conduct risk framework; and
- business planning process and monitoring.

The conduct risk framework is an important strategic control as it helps to ensure that our customers are treated fairly in terms of the products we sell and the service that is provided in relation to them. There are established conduct teams and a conduct risk framework has been developed to actively manage conduct risk. In addition to this, regular conduct reviews are completed by compliance and reported to the relevant risk committee.

There is a structured process in place to ensure a robust business plan is developed with sufficient awareness of the risks that could prevent its achievement. This is supported by regular monitoring of performance against plan, which allows action to be taken if needed.

Regulatory and legal risk

Examples of some key controls in place for regulatory and legal risks include:

- regulatory horizon scanning; and
- stress and scenario testing.

The compliance team undertakes regular regulatory horizon scanning to ensure that the entities are aware of regulations they may be subject to. As an example, the Cash and Capital Committee as a formal committee monitor financial resources and flexibility across the Group and (re)insurance carriers. Updates on regulatory developments are also provided to the relevant Board.

Hiscox carries out stress and scenario testing in order to challenge the capital requirements generated by the capital model. This helps to provide independent assurance that the capital held is sufficient to support the business following an extreme event. This also helps to identify actions that management can take in order to recover from an extreme event.

Group risk

Examples of some key controls in place for Group risks include:

- Hiscox Ltd Board oversight; and
- contingency planning.

All entities are subject to oversight by its own board and committees, and also by the Ltd Board and committees. This additional review, including by independent Non Executive Directors, helps to provide comfort that the Group, including HIB, is operating in a responsible manner.

Contingency plans are in place which can be followed in the event of failure of another entity in the Hiscox Group to minimise the impact.

C.7. Material risk concentrations

Concentrations within risk types are actively considered and managed through functional committees, often measuring

exposures against agreed limits (e.g. underwriting exposures assessed via catastrophe models and other exposure management techniques, and investment concentrations measured against agreed maximum limits per security or asset type/market). This may include the modelling and/or analysis of risk concentrations within individual risk types.

C.8. Investment in assets in accordance with the prudent person principles of the code of conduct

The Prudent Person Principle is embedded in Solvency II and is used to guide investments.

Hiscox invests in assets and instruments that can be properly identified, measured, monitored, managed, controlled and reported on. They are invested in a manner to ensure the security, quality, liquidity and profitability of the portfolio, and such that they are available to the Company in the relevant currency as required. Assets held to cover technical provisions are also invested in a manner appropriate to the nature and duration of liabilities. They are invested in the best interest of all stakeholders, taking particular account of customers.

Assets are diversified in such a way that there is no over reliance on, or concentration of risk in, any particular asset, issuer, group of undertaking, geography, asset class or other risk attribute in the Group or divisional portfolios.

C.9. Stress testing and sensitivity analysis to assess material risks

Hiscox uses stress and scenario testing (SST) to assess the robustness of the business plan and capital bases to a wide range of potential threats and issues, and to identify plausible and feasible future management actions that could be taken under those scenarios to protect the business and facilitate its viability.

A variety of methods are used to undertake such analysis, as follows:

- stress tests assess the impact of a change in an individual factor (e.g. standalone/individual basis stresses) on the business;
- scenario tests assess the impact of a change in the overall operating environment resulting from a number of factors or a particular event (e.g. realistic disaster scenario (RDS) analysis; aggregations of stresses; or a series of events across different risk types that could impact the business either simultaneously or through consequential second-order effects).
- reverse stress testing (RST) assesses scenarios and circumstances that would render the business model unviable. Hiscox defines unviability as the business being no longer willing or able to write premium or the point at which crystallising risks cause the market to lose confidence in the business and, therefore, the projected business plan targets cannot be met. Business unviability will not necessarily be the point at which the business runs out of capital as the business model could fail well before regulatory capital is exhausted.
- Forward-looking assessments consider the impact of events on a multi-year basis (e.g. from 2021 to 2023).

Hiscox has a library of stress, scenario and reverse stress tests which is reviewed regularly to ensure it remains

relevant. The tests that are viewed as most appropriate, considering business interests, in each cycle are selected and conducted.

To define and develop the stress tests and reverse stress tests, a series of meetings were held with business experts to consider how the business would be affected under each of the suggested scenarios and to discuss the controls, monitoring and management actions in place to reduce the impact of the events. This generated the initial assumptions used in modelling the outcomes of these scenarios.

In all scenarios, a number of potential mitigating factors and plausible future management actions have been identified to address the potential adverse effects on solvency, liquidity and viability. Potential constraints on these future management actions have also been considered (e.g. legislative matters, economic environment, and reputational impact).

D. Solvency valuation

A fundamental premise underlying the economic balance sheet (EBS) framework is that assets and liabilities are valued on a consistent economic basis. This common principle postulates the reduction or elimination, where possible, of accounting mismatches where no underlying economic mismatches exist.

Our assets and liabilities are valued using market values or the fair value option allowable under international financial reporting standards (IFRS). Insurance technical provisions are valued based on best-estimate cash flows, adjusted to reflect the time value of money using a risk-free discount rate term structure. A risk margin is applied to reflect the uncertainty inherent in the underlying cash flows. For other assets and liabilities where no fair value is readily available we use the value as determined under IFRS.

The material differences between shareholder's equity as stated in the financial statements versus available capital and surplus can be summarised as follows:

- the subordinated debt is treated as Tier 2 ancillary capital versus a liability in the financial statements;

- current IFRS uses the unearned premium and deferred acquisition cost approach for unexpired risks and undiscounted reserves for past claims related to expired risks. For the statutory capital and surplus we use the discounted best estimate of fulfilment cash flows;
- exclusion of goodwill, prepayments and certain intangible assets that cannot be sold separately.

D.1. Valuing assets

The Company has used the valuation principles outlined by BMA's 'Guidance Note for Statutory Reporting Regime' for the reporting period's statutory filing. The economic valuation principles outlined in this document are to measure assets and liabilities on a fair-value basis (which is the value that would be received upon the sale of an asset or paid to transfer a liability in an orderly transaction between open market participants at the measurement date).

D.2. Valuing liabilities

Insurance technical provisions are valued based on best estimate cash flows, adjusted to reflect the time value of money using a risk-free discount rate term structure with an appropriate liquidity adjustment. In addition, there is a risk margin to reflect the uncertainty contained inherent in the underlying cash flows, which is calculated using the cost of capital approach and a risk-free discount rate term structure. The discount rate term structures are prescribed by the BMA for each reporting period.

The best estimate for the loss and loss expense provision is calculated by using generally accepted accounting principles reserves as the starting point and then performing a series of adjustments:

- removal of prudence margins;
- incorporation of statistical likelihood of defaults within the reinsurance counterparty group;
- incorporation of events not in data (ENID);
- other adjustments related to consideration for investment expenses, etc.;
- discounting of cash flows.

Source: BSCR – Form 1 EBS.

The best estimate earned reserve position from the quarterly reserving process is used to form the basis for the claim provisions. The reserves are adjusted to allow for ENIDs, which is done by applying a series of uplift factors to the gross and net reserves for each class of business.

Reinsurance recoveries are estimated using known estimates plus an expected recovery rate to the gross IBNR estimates. These recovery rates are based on the reinsurance programme purchased, historic recovery rates and underwriters' estimates. An explicit deduction for counterparty risk is made to future reinsurance recoveries.

Cash flow patterns are applied by class, currency and year of account, split by the individual provisions. Cash flows are then discounted using prescribed rates from the BMA. There are no guarantees or options which materially affect the calculation of the best estimate. Any relevant guarantees would be identified through discussions with underwriters and the impact of guarantees would be valued based on best estimate claims provisions.

The best estimate for the premium provision is calculated by using the unearned premium reserve based on generally accepted accounting principles, adjusting for bound but not incepted business as at 31 December 2020 and applying expected future loss ratios, expense ratios and appropriate claims pay-out patterns to derive cash flows, which are then discounted.

In response to the Covid-19 pandemic, the Group reviewed and assessed the potential implications for each class of business that the Group underwrites, across all its platforms, with involvement from underwriting, reserving, claims and finance teams. The output of this assessment formed the basis of reserving.

The Group has material exposure to losses arising out of Covid-19 and currently reserves \$475 million net of reinsurance for these claims in their IFRS Report and Accounts. Covid-19 is an unprecedented event for the insurance industry and the effects of it as a loss event to the insurance and reinsurance markets remain both

ongoing and uncertain. The ultimate amounts of these claims are subject to a higher than normal level of uncertainty in the best estimate at this stage of development. Consequentially, in measuring the liabilities, the Group has included an allowance for risk and uncertainties that is above the best estimate to reflect the early stage in the claim development process.

Figures presented in this FCR take account of the impact of Covid-19 on the Group and HIB. Specifically, the figures incorporate best estimates of ultimate claims for Covid-19 losses, both earned and unearned at the valuation date. These were updated following the UK Supreme Court Judgment on 15 January 2021, on the appeal of the Financial Conduct Authority (FCA) Test Case on the contractual interpretation of wordings in certain UK property insurance policies affected by the various government actions taken to prevent the spread of Covid-19.

In determining the Covid-19-related net claims, the Group estimates the reinsurers' share of the claims by applying a consistent set of assumptions with those in determining the gross claims, considering the individual wording of the reinsurance treaties, and estimating default risks. Changes to this set of assumptions and estimate could materially affect the amount of reinsurers' share of the claims.

E. Capital management

The Group's primary objectives when managing its capital position are:

- to safeguard its ability to continue as a going concern, so that it can continue to pay customer claims as they arise, to provide long-term growth and progressive dividend returns for shareholders;
- to provide an adequate return to the Group's shareholders by pricing its insurance products and services commensurately with the level of risk;
- to maintain an efficient cost of capital;
- to comply with all regulatory requirements by an appropriate margin;
- to maintain financial strength ratings of A in each of its insurance entities; and
- to settle policyholders' claims as they arise.

Regulatory capital requirements

	2020 Amount (\$000)	2020 Ratio %	2019 Amount (\$000)	2019 Ratio %
Hiscox Ltd				
Minimum margin of solvency	896,978	–	651,609	–
Enhanced capital requirement	1,524,388	187	1,308,645	208
HIB				
Minimum margin of solvency	571,326	–	321,463	–
Enhanced capital requirement	722,737	201	366,767	196
HCL				
Minimum margin of solvency	–	–	156,541	–
Enhanced capital requirement	–	–	370,467	168

The Group sets the amount of capital required in its funding structure in proportion to risk. It then manages the capital structure and makes adjustments in light of changes in economic conditions and the risk characteristics of the underlying assets. In order to obtain or maintain an optimal capital structure the Group may adjust the amount of dividends paid to shareholders, return capital to shareholders, issue new shares, assume debt, or sell assets to reduce debt.

The Group's activities are funded by a mixture of capital sources including issued equity share capital, retained earnings, Letters of Credit, bank debt, long-term debt and other third-party insurance capital.

The Board ensures that the use and allocation of capital are given a primary focus in all significant operational actions.

With that in mind, the Group has developed and embedded capital modelling tools within its business. These join together short-term and long-term business plans and link divisional aspirations with the Group's overall strategy.

The models provide the basis of the allocation of capital to different businesses and business lines, as well as the regulatory and rating agency capital processes.

During the year the Group was in compliance with individual capital requirements imposed by regulators in each jurisdiction where the Group operates and with the Group solvency requirements imposed on Hiscox Ltd by the BMA.

In the face of the uncertainty arising from Covid-19 and the losses it generated, the Board took the decision not to pay a 2019 final or 2020 interim dividend. In view of the full year loss and a desire to have capital to deploy into a strong market, the Board has also taken the decision not to pay a 2020 final dividend. The Board believes that as our business delivers the 2021 business plan and as profits flow through, it will, subject to approval at the time, resume paying dividends with the 2021 interim results.

On 6 May 2020, the Group announced the successful completion of the non-pre-emptive placing of new ordinary shares of 6.5 pence each in the capital of the Company announced on 5 May 2020. The capital raise of 57,693,425 new ordinary shares raised gross proceeds of approximately \$463 million or £375 million. The issuance represents, in aggregate, approximately 19.48% of the existing issued ordinary share capital of Hiscox prior to the capital raise.

As a consequence the shareholders' equity of the Group and the available capital increased by approximately \$452 million and the total issued ordinary share capital of \$555 million.

E.1. Eligible capital

The BMA uses a three-tiered capital quality assessment system for assessing the statutory capital and surplus 'eligible capital'. The tiered capital system classifies capital instruments with different qualities into different tiers, based on their loss absorbency characteristics. Tier 1 is the most loss-absorbent (able to absorb or respond to losses under all circumstances), going down to Tier 3, which is the least loss-absorbent. Eligibility limits are then applied to each tier in determining the amounts eligible to cover regulatory capital requirement levels.

The BMA requires that at least 80% of the minimum solvency margin (MSM) and 60% of the enhanced capital ratio (ECR) is met by Tier 1 capital. The Group aims to hold substantial Tier 1 basic capital in excess of the Authority's regulatory capital requirements. The Group also holds \$376.0 million in Tier 2 ancillary capital, in the form of subordinated debt issued in November 2015 and \$67.8 million of assets transferred from Tier 1, as a result of an excess of assets held against best estimate policyholder technical provisions.

E.2. Fungibility of capital

We consider fungibility of capital to be the availability and transferability of capital across the Group. The Group monitors its capital requirements based on both external risk measures, set by regulators and the rating agencies, and its own internal guidelines of risk appetite. In the normal course of business, subsidiaries are often required to secure obligations by entering into collateral arrangements or provide financial guarantees. If required, the Group can source additional funding from revolving credit and Letter of Credit facilities. Standby funding from these sources comprised \$946 million at 31 December 2020 (2019: \$800 million), of which \$524 million was utilised at 31 December 2020 (2019: \$50 million).

F. Subsequent events

On February 13 until February 17, 2021, a major winter and ice storm (Winter Storm Uri) had widespread impact across the United States, Mexico, and Canada. At March 2021, Group has booked \$47 million of reserves for this loss.

On April 1, 2021, Hiscox Syndicates Limited as managing agent for Lloyd's Syndicate 3624 and Hiscox Insurance

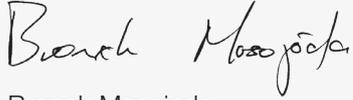

Eligible capital	2020	2020	2020	2019	2019	2019
	Tier 1	Tier 2	Tier 3	Tier 1	Tier 2	Tier 3
Hiscox Ltd (\$000)	2,399,868	443,769	–	2,256,154	429,910	–
HIB (\$000)	1,408,389	41,327	–	628,341	54,056	–
HCL (\$000)	–	–	–	596,123	25,000	–

Source: BSCR – summary.

Company (Bermuda) Limited entered into a healthcare loss portfolio transfer reinsurance agreement. Under this agreement, the reinsurer will assume the liabilities for up to \$125 million.

G. FCR declaration

To the best of my knowledge and belief, this financial condition report represents the financial condition of Hiscox Ltd and Hiscox Insurance Company (Bermuda) Limited as at 31 December 2020, in all material respects.

Joel Aronchick

HIB Non Executive Director

Joel was appointed to the HIB Board in May 2015, having initially joined the Board of Hiscox USA as a Non Executive Director in 2014. He is a retired Senior Executive of the Chubb Group of Insurance Companies, where he held a number of critical positions across different geographies during his 40-year tenure, and was a director of several of Chubb's operating companies including Chubb Re. He has held a number of other board directorships, predominantly within industry trade associations and also with the Associated Aviation Underwriters, a Joint Venture aviation insurance company.

Elizabeth Breeze

HIB Director

Elizabeth joined Hiscox in 2012, initially as the Group's Technical Accountant, a role which included advising on the initial set up of the Group's insurance-linked security (ILS) vehicles. In 2014 she was appointed Head of Finance for Hiscox UK, and in 2018 she returned to Bermuda to take up the role of CFO of Hiscox Re & ILS, having lived on the island for a number of years while working in the insurance audit and assurance practice at KPMG, where she qualified as a chartered accountant. She was appointed to the HIB Board on 6 December 2018.

Robert Childs

Hiscox Ltd Non Executive Chairman

Robert joined Hiscox in 1986, and has held a number of senior roles across the Group, including Active Underwriter for Syndicate 33 and Group Chief Underwriting Officer, before becoming Non Executive Chairman in February 2013. He joined the Council of Lloyd's in 2012 and has served as Deputy Chairman of Lloyd's from 2017 to 2020. External board appointments: The Bermuda Society.

Caroline Foulger

Hiscox Ltd and HIB Non Executive Director

Caroline joined Hiscox Ltd as a Non Executive Director in January 2013. Caroline is Bermudian and a resident of Bermuda and led PwC's insurance and reinsurance practice in Bermuda until her retirement in 2012. With a strong background in accounting, she is a Fellow of the Institute of Chartered Accountants in England and Wales, a member of the Institute of Chartered Accountants of Bermuda and a member of the Institute of Directors. External board appointments: Oakley Capital Investments Limited; Catalina Holdings (Bermuda) Ltd; Generation Life Ltd; General Two Ltd; Atlas Arteria; Ocean Wilsons.

Michael Goodwin

Hiscox Ltd Independent Non Executive Director

Michael joined Hiscox in November 2017. Michael has over 25 years' experience in the insurance industry, having worked in Australia and the Asia Pacific region for QBE Insurance Group for over 20 years. Michael started his career as an actuary, is a Fellow of the Institute of Actuaries of Australia and served as Vice President of the General Insurance Association of Singapore between 2006 and 2012. External board appointments: Partner Reinsurance Asia Pte Ltd; Steadfast Distribution Services Pte Ltd; NCI Brokers (Asia) Pte Ltd; Galaxy Insurance Consultants Pte Ltd; Enya-Lea Pte Ltd; Werombi Pte Ltd.

Samantha Hartwell

HIB Company Secretary

Samantha joined Hiscox Re & ILS in 2020 as Legal Associate. She is Bermudian and a resident of Bermuda. She has responsibility for providing legal counsel and support to the Group General Counsel and the ILS Investment team, and works closely with executive management. Samantha is a Director of Hiscox Dollar

Holdings Ltd. and is Secretary of Hiscox Insurance (Company) Bermuda Limited. Prior to joining Hiscox, Samantha was called to the Bermuda Bar in 2015 and was an associate in the Corporate Department of ASW Law Limited where she advised international corporate and financial clients on all aspects of Bermuda corporate law.

Thomas Hürlimann

Hiscox Ltd Independent Non Executive Director

Thomas joined Hiscox in November 2017. Thomas has 30 years' experience in banking, reinsurance and insurance. He was CEO of Global Corporate at Zurich Insurance Group, a \$9 billion business working in over 200 countries. Prior to that, he held senior positions at Swiss Re Group and National Westminster Bank.

Aki Hussain

Hiscox Ltd Executive Director and CFO

Aki joined Hiscox in 2016 from Prudential, where he was Chief Financial Officer of its UK and Europe business. Before that, he held a number of senior roles across a range of sectors, including Finance director for Lloyds Banking Group's consumer bank division until 2009. Aki is a Chartered Accountant, having trained with KPMG. External board appointments: Visa Europe Limited.

Colin Keogh

Hiscox Ltd Non Executive Director

Colin joined Hiscox in November 2015. Colin has spent his career in financial services, principally at Close Brothers Group plc, where he worked for 24 years and was CEO for seven years until 2009. External board appointments: Ninety One Plc; Premium Credit Limited

Anne MacDonald

Hiscox Ltd Non Executive Director

Anne joined Hiscox in May 2015. Anne has served as Chief Marketing Officer at four Fortune 100 companies, and been in charge of some of the most recognised brands in the world, including Citigroup, Traveler's, Macy's and Pepsi. External board appointments: Boot Barn Holdings, Inc; Zeotap; Ignite National; Tuckerman & Co; Chops Snacks; Visiting Nurse & Hospice of Litchfield County.

Bronek Masojada

Hiscox Ltd Executive Director and CEO

Bronek joined Hiscox in 1993 as Group Managing Director and became Chief Executive in 2000. Prior to that he worked with McKinsey & Company, where he advised Lloyd's on its renowned Reconstruction and Renewal plan. Bronek also previously served as Deputy Chairman of Lloyd's and Chairman of the Lloyd's Tercentenary Research Foundation. External board appointments: Association of British Insurers; Pool Reinsurance Company Limited; Policy Placement Limited.

Constantinos Miranthis

Hiscox Ltd Independent Non Executive Director

Costas joined Hiscox in November 2017 and is a resident of Bermuda. He served as President and CEO of PartnerRe Ltd, one of the world's leading reinsurers, until 2015 and prior to that was a Principal of Tillinghast-Towers Perrin in London, where he led its European non-life practice.

A trained actuary, he is a member of the UK Institute and Faculty of Actuaries and a resident of Bermuda. External board appointments: none.

Joanne Musselle

Hiscox Ltd Executive Director and CUO

Joanne joined Hiscox in 2002 and has held a number of roles across the Group, including Head of UK Claims, Chief Underwriting Officer for Hiscox UK & Ireland, and Chief Underwriting Officer for Hiscox Retail. Prior to Hiscox, Joanne spent almost ten years working in a variety of actuarial, pricing and reserving roles at Axa and Aviva in both the UK and Asian markets. External board appointments: Realty Insurances Ltd.

Lynn Pike

Hiscox Ltd Independent Non Executive Director

Lynn joined Hiscox in May 2015. Lynn worked in the US banking industry for nearly four decades, most recently as President of Capital One Bank. Before that, she was President of Bank of America's small business banking division, a multi-billion-Dollar business with 110,000 clients and over 2,000 employees. Lynn currently serves on the board of America Express Company (NYSE:AXP) and America Express National Bank.

Kathleen Reardon

Hiscox Re & ILS Chief Executive Officer

Kathleen Reardon joined Hiscox Re & ILS in January 2021 as Chief Executive Officer. From 2014 to 2020, Kathleen was CEO of Hamilton Re, Ltd., previously serving as Chief Underwriting Officer Property from 2012. Prior to Hamilton, she served as SVP, Chief Underwriting Officer International for ACE (now Chubb) Tempest Re Bermuda. Kathleen is co-founder and board member of Women in Reinsurance in Bermuda, having served as Chair from 2014-2019; and serves as a founding Committee Member of WeSpeak Bermuda. She served as an officer of the Reinsurance Association of America from 2018-2020 and is a Fellow of the Casualty Actuarial Society and a Member of the American Academy of Actuaries. She currently serves on the Board of Trustees at the Drexel University, Philadelphia.

Heather Shrub

HIB Assistant Secretary

Heather joined Hiscox in 2010. She is Bermudian. She has been working in administrative positions in the legal and financial services industries for many years. Heather is Assistant Secretary of Hiscox Insurance (Company) Bermuda Limited. Her previous employers include Smith Barnard & Diel, Bank of Bermuda Limited, Butterfield Trust (Bermuda) Limited and HSBC Bank Bermuda Limited. She has served on the Board of the National Dance Foundation of Bermuda.

Marc Wetherhill

HIB Director and Hiscox Ltd Company Secretary

Marc joined Hiscox in 2017 as Group Company Secretary and General Counsel for Hiscox Ltd. He is Bermudian and a resident of Bermuda. He joined from PartnerRe Group, where he was Chief Legal Counsel, Chief Compliance Officer and Secretary to the Board. Prior to his 14 years with Partner Re, Marc was a Solicitor with Appleby in Bermuda and Berryman in London – having qualified as a Solicitor in both England and Bermuda.
